RE: Proposed Fire Station Site on West Main St in Warner

The Board of Commissioners of the Warner Village Water District has concerns regarding the site proposed to erect a new fire station for Warner.

1. The site on West Main Street sits over the aquifer from which the District withdraws water to provide to its 210 hook-ups in the Village. The proposed site is within the well head protection area.
2. The stream in the rear of the property enters the Warner River just north of the well site.

The Commissioners are concerned with possible contamination of our wells from run-off and ground contamination from the fire trucks and the parking lots. What is the proposed containment plan?

The Commissioners request that Department of Environmental Services and the EPA be consulted and that the Commissioners received a copy of their reports.
